## **MESSAGE**

Agriculture is lifeline of Pakistan's economy. About 68% of population is engaged in farming directly or indirectly. Pakistan has a great potential for horticulture due to the variety in land and climate which provide rich opportunity for the production of a wide range of horticulture corps.

This publication includes statistics on fruit, vegetable and floriculture commodities produced in the country it may be said that a viable, profitable horticulture sector can provide sustainable livelihoods to the rural population engaged primarily in Agriculture.

There is a need to take the horticulture sector to the next level. in terms of export earning, through meeting international standards of hygiene, packaging,. Salesmanship, storage and transportation requirements. The government has to encourage entrepreneurs of fruit, vegetable and floriculture by introducing transparent, incentive based level playing field for the growers and also providing them required international training.

I appreciate the officers and staff of Economic Wing and also those who participated in collection and compilation of data .

**OMAR HAMID KHAN**  
Secretary  
Ministry of National Food Security and Research

16<sup>th</sup> April , 2020

## **FOREWORD**

. Food Security and economic development of the country predominantly hinges upon the agriculture sector. Horticulture in Pakistan has emerged an important sector contributing to the national agricultural GDP's share and produce large number of horticultural products to fulfill domestic demand of fruit and vegetables for ever increasing population. The demand for fruits and vegetables is continuously increasing in local and export markets.

Pakistan is a major producer of fruits and vegetables. More than 29 types of fruits and 33 types of vegetables are produced in the country throughout the year. However, most of the production is consumed in domestic markets. Production of citrus, mango, apple, melons, dates, guava, and apricot reflect strong domestic market demand for horticulture crops. Citrus fruit, primarily the mandarin variety. The highest production have reached i.e Citrus fruit & Mango 2.4 and 1.7 million tons, the largest fruit crop group by volume and are major export revenue earner. According to latest figures Pakistan exported 755.7 thousand ton of fruits and vegetables 1022.9 thousand ton in FY 2018-19.

I hope this book will provide a useful data base and reference document for the policy makers, researchers, students, planners and general public. I appreciate the hard work done by the officers and staff of the Economic Wing involved in data collection and compilation of "**Fruit, Vegetables and Condiments Statistics of Pakistan, 2018-19**".

Suggestions for improvement of the publication will be welcomed

(Dr.Muhammad Ali Talpur)

Economic Consultant

16<sup>th</sup> April, 2020

## **MESSAGE**

Horticulture sector has the prime importance in Pakistan Agriculture Industry. The horticulture sector is not only producing fruits and vegetables for local consumption but also earning a handsome amount of foreign exchange through export of fruits and vegetables produced in Pakistan. Pakistan is self-sufficient in production of staple foods, livestock and dairy, however, economic access and utilization persist as the major limiting factors for household-level food and nutrition security..

2. Present Government has accorded high priority to the development of agriculture to play a vital role in boosting national economy and ensuring food and nutritional security. The emphasis is also given to agriculture, livestock, research and development priorities with a focus on nutrient dense foods such as fruits, vegetables, legumes and animal source foods. Fruit, Vegetables and Condiments Statistics of Pakistan book 2018-19 is valuable addition in the Ministry's Publications and suggestions are welcome.

***Syed Fakhar Imam***

Minister for National Food Security and Research (NFS&R)

16<sup>th</sup> April, 2020

## **EXECUTIVE SUMMARY**

Pakistan has an ideal climate for cultivation of a variety of fruits. Thus an assortment of tropical, sub-tropical and temperate fruit are grown in the country. Different varieties of fruits are cultivated on an area of more than 0.74 million hectares with a total production of more than 6,96 million tones. In 2018-19, fruits export of 1.60 million tons and in 2019-20 it is, 1.80 million ton, an increase of 13 percent as compared to last year. Pakistan fruits are in high demand globally, mainly dates, mangoes, guavas, strawberries (and other berries), citrus, bananas, apricots, etc

Major vegetables grown in the country are potato, onion, chilies, tomato, turnip, carrot, cauliflower, peas and gourd which cover 78% of the total area and vegetables accounting 81% of total production. Potato has the major share in area and production which is 30.2% and 40 & respectively, followed by onion with receptive share of 21.2% and 21.4%. Total area and production of vegetables including potato in 2018-19 is 0.46 million hectors and 8.37 million ton. In 2018-19, vegetable export was 1.02% million ton while in 2019-20, it is 8.80 million ton an increase of 16.1 percent as compared to last year.

Horticulture, a major contributes to the agriculture export sector of Pakistan, is unfortunately much neglected. Citrus, mangoes, potatoes, onions, apricot, cherries and cabbages are the primary export items from Pakistan and are highly recognizable all over the world. Since the low production of internationally favorites fruits like banana, apple, orange, grape and strawberry can hardly meet the demand of the domestic market, export opportunities have squeezed further. Horticulture sector contributes about 12 per cent to the national agriculture GDP, but its volume of exports remains relatively low.

There are many factors which will determine the future scope of horticulture in Pakistan. As we know that Pakistan is an agricultural country and we can hope that future scope of horticulture in Pakistan would be more and better. There are many problems with our today's horticultural world and there is a strong need to eradicate these issues for much better future world of horticulture.

Concluding the above facts, there is a dire need to bring a systemic change in our current agriculture practices. Adaptation of modern agricultural practices, export oriented cultivation of varieties, changing the trend of supply led production to demand driven agriculture, improving SPS (sanitary & phyto-sanitary) regime, encouraging value addition trends, catering international market demands and strengthening supply chain management will be some of the key areas which can anchor our horticulture industry in particular and agriculture in general in longer run.
